

Strong and Secure

WireCrafters Style 840 partition system is used to build prisoner holding cells in correctional and detention centers across the country. Our Style 840 Holding Cells are designed for supervised temporary confinement while prisoners are being processed or detained for a short period of time. Because of the versatility of our wire partition system, the strong wire partition panels can be configured to meet facility needs utilizing our standard parts.

Hardware Access

A hinged door with a secure lock device keeps detainees and prisoners in the holding cell. Ceiling panels constructed of the same material completes the holding cell, and our unique design prevents access to all hardware from the secure side of the holding cell enclosure.

Features

(Right) Anchorable 11-gauge steel benches may be added to the cell or purchased separately.

(Left) Top and bottom slide bolts may also be added to the door. Customer specied locks may be integrated into the system as well.
