

Bike Stacker®

WireCrafters Bike Stacker multiple bicycle storage rack is an efficient way to store multiple bikes in condominiums, apartment buildings, and multi-family dwellings. The Bike Stacker storage rack comes in different sizes that store between 8 and 14 bikes simultaneously. Our double-tiered rack design allows the storage of more bikes in a smaller space; which is extremely important in larger cities where storage space is at a premium.

Wall Rider®

The Wall Rider storage brackets are the ideal way to provide stable, vertical bike storage on unused existing walls. The bracket gives you a quick and easy way to store your tenants' bikes without excessive expense. These bike storage brackets can be another revenue source for building management, and for a few dollars a month, a tenant can store their bike safely, securely and have fast easy access to it.
